Application No. 10/645,333 Filed: August 21, 2003 TC Art Unit: 1742 Confirmation No.: 7603

AMENDMENT TO THE CLAIMS

(Currently Amended) A method for producing by injection molding a composite metal product containing a carbon nano material and a metal material, comprising the steps of:

mixing the carbon nano material with the metal material in a powder state;

compressing a resultant mixed material to a sheet-shaped solid material by a hot press;

forming said sheet-shaped solid mixed material into granules such as chips, pellets, and the like;

melting the metal in the granules and kneading the metal and the carbon nano materials to form a composite material and injecting the composite material into a mold to form the composite metal product by using an injection machine; and

obtaining the composite metal product.

- (Original) The method according to claim 1, wherein the melting and kneading step and the injecting step are performed by using an inline screw type injection machine or a screw type preplasticization injection machine.
- (Previously Presented) The method according to claim 1, wherein the metal material comprises a low melting point metal material.
- (Previously Presented) A composite metal product containing a carbon nano material and a metal material, wherein said composite metal product is obtained by the method according to claim 1.
